## SUBJECT INDEX

### ABERRATION

- Amblyopia in astigmatic preschool children 43: 1081
- Astigmatism in infant monkeys reared with cylindrical lenses 43: 2721
- Comparison of the time courses of concomitant and nonconcomitant vertical phoria adaptation 43: 567
- Disorders of vertical optokinetic nystagmus in patients with ocular misalignment 43: 347
- Effects of stimulus size and luminance on oscillopsia in congenital nystagmus 43: 2697
- Effects of tenotomy surgery on congenital nystagmus waveforms in adult patients. Part I. Wavelet spectral analysis 43: 2345
- Effects of tenotomy surgery on congenital nystagmus waveforms in adult patients. Part II. Dynamical systems analysis 43: 2357
- Meridional anisotropy in visual processing: implications for the neural site of the oblique effect 43: 2281
- Short-latency disparity-vergence eye movements in humans: sensitivity to simulated orthogonal tropias 43: 431
- Visual field anisotropy revealed by perceptual filling-in 43: 2029
- Visual motion detection in patients with absent vestibular function 43: 1589

### ABSOLUTE THRESHOLD. *see* DETECTION THRESHOLD

### ACCOMMODATION

- Amplitude dependent accommodative dynamics in humans 43: 2945
- An evaluation of the lag of accommodation using photorefracton 43: 419
- Changes in the internal structure of the human crystalline lens with age and accommodation 43: 2363

### ACUITY (*see also* HYPERACUITY; STEREOPSIS)

- Hermite acuity gratings and models of space-variant acuity 43: 1597
- The influence of the Stiles–Crawford peak location on visual performance 43: 659
- The shape and size of crowding for moving targets 43: 2895
- Short-wavelength acuity: blue–yellow and achromatic resolution loss with age 43: 109
- Short-wavelength acuity: optical factors affecting detection and resolution of blue–yellow sinusoidal gratings in foveal and peripheral vision 43: 101
- The visual acuity and refractive state of the American kestrel (*Falco sparverius*) 43: 2053

### ADAPTATION

- Adaptation of response transients in fly motion vision. I: Experiments 43: 1291
- Adaptation of response transients in fly motion vision. II: Model studies 43: 1309
- Adaptation to vertical disparity induced-depth: implications for disparity processing 43: 135
- Attentional selection of overlapped shapes: a study using brief shape aftereffects 43: 549
- Colour and luminance selectivity of spatial and temporal interactions in orientation perception 43: 2885
- Contour integration in peripheral vision reduces gradually with eccentricity 43: 2427
- Opposing views on orthogonal adaptation: a reply to Westheimer and Gee (2002) 43: 717 (discussion)
- Opposing views on orthogonal adaptation: a response to Clifford, Arnold, Smith and Pianta (2003) 43: 721 (discussion)
- Unconscious adaptation: a new illusion of depth induced by stimulus features without depth 43: 2773
- Variance normalisation: a key mechanism for temporal adaptation in natural vision? 43: 1895

### ADAPTATION, CHROMATIC

- The spatial tuning of chromatic adaptation 43: 1611
- Time-course of S-cone system adaptation to simple and complex fields 43: 1135

**ADAPTATION, DARK**

- Availability of 11-cis retinal and opsins without chromophore as revealed by small bleaches of rhodopsin in excised albino mouse eyes 43: 3069
- Bleaching desensitization: background and current challenges 43: 3011
- A comparison of three techniques to estimate the human dark-adapted cone electroretinogram 43: 2089
- Effects of light and dark adaptation of rods on specific-hue threshold 43: 2905

**ADAPTATION, LIGHT**

- Effects of light and dark adaptation of rods on specific-hue threshold 43: 2905

**ADAPTATION, OCULOMOTOR**

- Comparison of the time courses of concomitant and nonconcomitant vertical phoria adaptation 43: 567

**ADAPTATION, POST-RECEPTORAL**

- Gaze modulation of visual aftereffects 43: 639
- Time-course of S-cone system adaptation to simple and complex fields 43: 1135

**AFTEREFFECTS (*see also* ILLUSION)**

- Adaptation to vertical disparity induced-depth: implications for disparity processing 43: 135
- Attentional selection of overlapped shapes: a study using brief shape aftereffects 43: 549
- Colour and luminance selectivity of spatial and temporal interactions in orientation perception 43: 2885
- A gain-control model relating nulling results to the duration of dynamic motion aftereffects 43: 117
- Gaze modulation of visual aftereffects 43: 639
- Influence of viewing distance on aftereffects of moving random pixel arrays 43: 2413
- Paired and unpaired features can be equally effective in human depth perception 43: 1
- Pupil responses associated with coloured afterimages are mediated by the magnocellular pathway 43: 1423
- Unconscious adaptation: a new illusion of depth induced by stimulus features without depth 43: 2773

**AFTERIMAGES. *see* AFTEREFFECTS****AGING**

- A2E, a byproduct of the visual cycle 43: 2983
- Changes in the internal structure of the human crystalline lens with age and accommodation 43: 2363
- Effect of sleep deprivation and driving duration on the useful visual field in younger and older subjects during simulator driving 43: 1465
- Macular pigment density and distribution: comparison of fundus autofluorescence with minimum motion photometry 43: 1765
- Orientation of Listing's plane during static tilt in young and older human subjects 43: 67
- Senescence of the temporal impulse response to a luminous pulse 43: 617
- Short-wavelength acuity: blue-yellow and achromatic resolution loss with age 43: 109

**ALIGNMENT. *see* HYPERACUITY****AMBLYOPIA**

- Amblyopia in astigmatic preschool children 43: 1081
- Border distinctness in amblyopia 43: 2255
- Deficits to global motion processing in human amblyopia 43: 729
- Disorders of vertical optokinetic nystagmus in patients with ocular misalignment 43: 347

**ANTIBODIES. *see* IMMUNOCHEMISTRY****APPARENT MOTION. *see* MOTION PERCEPTION, APPARENT MOTION**

## ATTENTION

- An integrated network for invariant visual detection and recognition 43: 2073
- Attention and scintillation 43: 2191
- Attention enhances feature integration 43: 1793
- Attentional modulation of threshold sensitivity to first-order motion and second-order motion patterns 43: 2927
- Attentional selection of overlapped shapes: a study using brief shape aftereffects 43: 549
- Attentional selection of superimposed surfaces cannot be explained by modulation of the gain of color channels 43: 1323
- Direct parameter specification of an attention shift: evidence from perceptual latency priming 43: 1351
- Distractor heterogeneity, attention, and color in visual search 43: 1541
- Divided attention and visual search for simple versus complex features 43: 2213
- Effects of pictorially-defined surfaces on visual search 43: 1869
- Exogenously cued attention triggers competitive selection of surfaces 43: 59
- Expectancy effects on spatial frequency processing 43: 2759
- Four-dot masking produces the attentional blink 43: 1907
- Global feature-based attention for motion and color 43: 629
- Large capacity storage of integrated objects before change blindness 43: 149
- Microsaccades uncover the orientation of covert attention 43: 1035
- The overlay interference task and object-selective visual attention 43: 1443
- The selective tuning model of attention: psychophysical evidence for a suppressive annulus around an attended item 43: 205
- Spatial localization precedes temporal determination in visual perception 43: 1667
- Spatiotemporal characteristics of dynamic feature binding in visual working memory 43: 2107
- Visual comparisons within and between object parts: evidence for a single-part superiority effect 43: 1655

## ATTENTIONAL BLINK

- Exogenously cued attention triggers competitive selection of surfaces 43: 59
- Four-dot masking produces the attentional blink 43: 1907

## AVIAN VISION

- Clinical features of the retinopathy, globe enlarged (*rge*) chick phenotype 43: 2009
- Further evidence that chick eyes use the sign of blur in spectacle lens compensation 43: 1519
- Ontogenic changes of kynurenine aminotransferase I activity and its expression in the chicken retina 43: 1513
- The visual acuity and refractive state of the American kestrel (*Falco sparverius*) 43: 2053

## BAYESIAN METHOD/TECHNIQUE

- Utility of a dynamic termination criterion in the ZEST adaptive threshold method 43: 165

## BINDING

- Attention enhances feature integration 43: 1793
- Comparison between oleic acid and docosahexaenoic acid binding to interphotoreceptor retinoid-binding protein 43: 3063
- Fusion of competing features is not serial 43: 1951
- Interphotoreceptor retinoid-binding protein—an old gene for new eyes 43: 3021
- Origin of the vertebrate visual cycle: II. Visual cycle proteins are localized in whole brain including photoreceptor cells of a primitive chordate 43: 3045
- A paradox of temporal perception revealed by a stimulus oscillating in colour and orientation 43: 2245
- Secondary binding sites of retinoids in opsin: characterization and role in regeneration 43: 3003
- Spatiotemporal characteristics of dynamic feature binding in visual working memory 43: 2107
- Visual cycle retinoid processing proteins are present in HEK293S cells 43: 3037

## BINOCULAR RIVALRY (*see also* VISUAL FIELD, SUPPRESSION)

- Increasing depth of binocular rivalry suppression along two visual pathways 43: 2003
- Intra- and interocular colour-specific activation during dichoptic suppression 43: 1111

Subjective contours and binocular rivalry suppression 43: 1533  
 Temporal characteristics of binocular rivalry: visual field asymmetries 43: 2207

## **BINOCULAR SUMMATION. *see* SUMMATION, BINOCULAR**

## **BINOCULAR VISION**

Coordinating one hand with two eyes: optimizing for field of view in a pointing task 43: 409  
 Detecting disparity in two-dimensional patterns 43: 1009  
 Differential binocular input and local stereopsis 43: 2303  
 Early binocular vision in human infants: limitations on the generality of the Superposition Hypothesis 43: 1563  
 Geometric and induced effects in binocular stereopsis and motion parallax 43: 1879  
 The influence of cyclovergence on unconstrained stereoscopic matching 43: 307  
 Integration of binocular disparity and monocular cues at near threshold level 43: 2439  
 Monocular gap stereopsis: manipulation of the outer edge disparity and the shape of the gap 43: 1937  
 Monocular transparency generates quantitative depth 43: 2615  
 Paired and unpaired features can be equally effective in human depth perception 43: 1  
 A physiological theory of depth perception from vertical disparity 43: 85  
 Poor visibility of motion in depth is due to early motion averaging 43: 385  
 Reading a population code: a multi-scale neural model for representing binocular disparity 43: 445  
 Short-latency ocular following in humans is dependent on absolute (rather than relative) binocular disparity 43: 1387  
 Spatial and temporal tuning of motion in depth 43: 2861  
 Temporal integration for stereoscopic vision 43: 505  
 Unconscious adaptation: a new illusion of depth induced by stimulus features without depth 43: 2773  
 Visual field defects in albino ferrets (*Mustela putorius furo*) 43: 793

## **BIPOLAR CELLS**

Functional modifications in rod bipolar cells in a mouse model of retinitis pigmentosa 43: 879  
 Remodeling of second-order neurons in the retina of rd/rd mutant mice 43: 867

## **BLEACHING (*see also* ADAPTATION, DARK)**

Availability of 11-cis retinal and opsins without chromophore as revealed by small bleaches of rhodopsin in excised albino mouse eyes 43: 3069  
 Bleaching desensitization: background and current challenges 43: 3011

## **BLINKING**

Four-dot masking produces the attentional blink 43: 1907

## **BRIGHTNESS PERCEPTION**

Visual perception in a blind subject with a chronic microelectronic retinal prosthesis 43: 2573

## **BROCA-SULZER EFFECT. *see* BRIGHTNESS PERCEPTION**

## **CELLS. *see* BIPOLAR CELLS; CORTEX; GANGLION CELLS; NEUROCHEMISTRY; TRANSPLANTATION**

## **CHANGE BLINDNESS**

Large capacity storage of integrated objects before change blindness 43: 149

## **CHANNELS**

Attentional selection of superimposed surfaces cannot be explained by modulation of the gain of color channels 43: 1323  
 Contrast conservation in human vision 43: 2637  
 A decay of gap junctions associated with ganglion cell differentiation during retinal regeneration of the adult newt 43: 2847  
 Expectancy effects on spatial frequency processing 43: 2759  
 Secondary binding sites of retinoids in opsin: characterization and role in regeneration 43: 3003

## CHOROID

- Changes in choroidal blood flow during light/dark transitions are not altered by atropine or propranolol in healthy subjects 43: 2185
- Gene therapy for choroideremia: in vitro rescue mediated by recombinant adenovirus 43: 919

## CHROMATIC ABERRATION. *see* ABERRATION

## CHROMATIC ADAPTATION. *see* ADAPTATION, CHROMATIC

## CHROMATIC CONTRAST. *see* COLOR CONTRAST

## CHROMATIC INDUCTION. *see* COLOR CONTRAST

## CLINICAL APPLICATIONS

- Macular pigment density and distribution: comparison of fundus autofluorescence with minimum motion photometry 43: 1765
- Patients with AMD and a large absolute central scotoma can be trained successfully to use eccentric viewing, as demonstrated in a scanning laser ophthalmoscope 43: 1777
- The photopic ERG luminance-response function (photopic hill): method of analysis and clinical application 43: 1405

## COGNITION

- Visual processing of rapidly presented stimuli is normalized in Parkinson's disease when proximal stimulus strength is enhanced 43: 2827

## COHERENCE

- The dynamics of bi-stable alternation in ambiguous motion displays: a fresh look at plaids 43: 531

## COLOR APPEARANCE

- Color and motion: which is the tortoise and which is the hare? 43: 2403
- Cone pigment variations in four genera of new world monkeys 43: 227
- Distractor heterogeneity, attention, and color in visual search 43: 1541
- Failure of signed chromatic apparent motion with luminance masking 43: 751
- Global feature-based attention for motion and color 43: 629
- Intra- and interocular colour-specific activation during dichoptic suppression 43: 1111
- Letter to the editor 43: 1719 (letter)
- A paradox of temporal perception revealed by a stimulus oscillating in colour and orientation 43: 2245
- Reply to Barris 43: 1721
- Short-wavelength acuity: optical factors affecting detection and resolution of blue-yellow sinusoidal gratings in foveal and peripheral vision 43: 101
- The spatial tuning of chromatic adaptation 43: 1611

## COLOR BLINDNESS. *see* DICHROMACY

## COLOR CODING

- Effects of light and dark adaptation of rods on specific-hue threshold 43: 2905

## COLOR CONTRAST

- Chromatic induction and the layout of colours within a complex scene 43: 1413
- Chromatic induction in neon colour spreading 43: 697
- Independence of mechanisms tuned along cardinal and non-cardinal axes of color space: evidence from factor analysis 43: 683
- Luminance mechanisms mediate the motion of red-green isoluminant gratings: the role of "temporal chromatic aberration" 43: 1235

## COLOR DISCRIMINATION

Colour thresholds in dichromats and normals 43: 983

## COLOR OPPONENCY

Chromatic induction and the layout of colours within a complex scene 43: 1413

The influence of color on the perception of luminance motion 43: 1159

## COLOR SELECTIVITY

Attentional selection of superimposed surfaces cannot be explained by modulation of the gain of color channels 43: 1323

Colour and luminance selectivity of spatial and temporal interactions in orientation perception 43: 2885

## CONES

Alterations of L- and M-cone driven ERGs in cone and cone-rod dystrophies 43: 2333

Analysis of L-cone/M-cone visual pigment gene arrays in females by long-range PCR 43: 489

A comparison of three techniques to estimate the human dark-adapted cone electroretinogram 43: 2089

Cone pigment variations in four genera of new world monkeys 43: 227

Cortical OFF-potentials from the S-cone pathway reveal neural damage in early glaucoma 43: 221

Effects of light and dark adaptation of rods on specific-hue threshold 43: 2905

Independence of mechanisms tuned along cardinal and non-cardinal axes of color space: evidence from factor analysis 43: 683

The influence of color on the perception of luminance motion 43: 1159

Multiple photopigments from the Mexican blind cavefish, *Astyanax fasciatus*: a microspectrophotometric study 43: 31

Short-wavelength acuity: blue-yellow and achromatic resolution loss with age 43: 109

Spatial summation of S-cone ON and OFF signals: effects of retinal eccentricity 43: 2875

Time-course of S-cone system adaptation to simple and complex fields 43: 1135

Wavelength dependence of the optomotor response in zebrafish (*Danio rerio*) 43: 1273

## CONTOUR PERCEPTION

Border distinctness in amblyopia 43: 2255

Contour integration in peripheral vision reduces gradually with eccentricity 43: 2427

The detection of direction-defined and speed-defined spatial contours: one mechanism or two? 43: 597

The distribution of preferred orientations in the peripheral visual field 43: 53

Grouping local directional signals into moving contours 43: 2141

Mixture models and the probabilistic structure of depth cues 43: 831

Motion detection and the coincidence of structure at high and low spatial frequencies 43: 371

Motion sharpening and contrast: Gain control precedes compressive non-linearity? 43: 1187

Orientational minimal redundancy wavelets: from edge detection to perception 43: 1061

“Phase capture” in the perception of interpolated shape: cue combination and the influence function 43: 2233

Subjective contours and binocular rivalry suppression 43: 1533

Visual evoked potentials to line- and luminance-defined triangles 43: 299

## CONTRAST DISCRIMINATION

Contrast conservation in human vision 43: 2637

Effects of contrast and length on vernier acuity explained with noisy templates 43: 707

## CONTRAST PERCEPTION

Binocular recognition summation in the peripheral visual field: contrast and orientation dependence 43: 1249

## CONTRAST SENSITIVITY

Border distinctness in amblyopia 43: 2255

Coding of the contrasts in natural images by populations of neurons in primary visual cortex (V1) 43: 1983

Contrast sensitivity in subgroups of developmental dyslexia 43: 467

Deficits to global motion processing in human amblyopia 43: 729

- Dual nonlinearities regulate contrast sensitivity in pattern discrimination tasks 43: 1433
- Hermite acuity gratings and models of space-variant acuity 43: 1597
- Human temporal impulse response speeds up with increased stimulus contrast 43: 285
- The influence of the Stiles–Crawford peak location on visual performance 43: 659
- Oblique stimuli are seen best (not worst!) in naturalistic broad-band stimuli: a horizontal effect 43: 1329
- Optokinetic potential and the perception of head-centred speed 43: 1709
- Power spectra and distribution of contrasts of natural images from different habitats 43: 2527
- Scaling of letter size and contrast equalises perception across eccentricities and set sizes 43: 769
- Sensitivity to contrast modulation: the spatial frequency dependence of second-order vision 43: 243
- Spatial frequency processing in inferred PC- and MC-pathways 43: 2133
- Temporal modulation of spatial contrast vision in pigeons (*Columba livia*) 43: 761
- Visual processing of rapidly presented stimuli is normalized in Parkinson's disease when proximal stimulus strength is enhanced 43: 2827
- When does illusory contour formation depend on contrast polarity? 43: 1915

## CORNEA

- Astigmatism in infant monkeys reared with cylindrical lenses 43: 2721
- In vivo pachymetry in normal eyes of rats, mice and rabbits with the optical low coherence reflectometer 43: 723
- Transplantation of ocular stem cells: the role of injury in incorporation and differentiation of grafted cells in the retina 43: 937

## CORTEX

- Changes in the internal structure of the human crystalline lens with age and accommodation 43: 2363
- Coding of the contrasts in natural images by populations of neurons in primary visual cortex (V1) 43: 1983
- Cortical visual functions can be preserved by subretinal RPE cell grafting in RCS rats 43: 1817
- Electrical activity in visual cortex associated with combined auditory and visual stimulation in temporal sequences known to be associated with a visual illusion 43: 2469
- Exogenously cued attention triggers competitive selection of surfaces 43: 59
- A laminar cortical model of stereopsis and three-dimensional surface perception 43: 801
- Meridional anisotropy in visual processing: implications for the neural site of the oblique effect 43: 2281
- Motion processing asymmetries and stereopsis in infants 43: 1961
- A paradox of temporal perception revealed by a stimulus oscillating in colour and orientation 43: 2245
- Self-organizing neural network model of motion processing in the visual cortex during smooth pursuit 43: 2155

## CORTICAL MAGNIFICATION

- Visual field anisotropy revealed by perceptual filling-in 43: 2029

## CURVATURE

- Visual comparisons within and between object parts: evidence for a single-part superiority effect 43: 1655

## DARK ADAPTATION. *see* ADAPTATION, DARK

## DEPTH PERCEPTION

- Adaptation to vertical disparity induced-depth: implications for disparity processing 43: 135
- Experience-dependent visual cue recalibration based on discrepancies between visual and haptic percepts 43: 2603
- Eye movements provide the extra-retinal signal required for the perception of depth from motion parallax 43: 1553
- Integration of binocular disparity and monocular cues at near threshold level 43: 2439
- A laminar cortical model of stereopsis and three-dimensional surface perception 43: 801
- Mixture models and the probabilistic structure of depth cues 43: 831
- Monocular gap stereopsis: manipulation of the outer edge disparity and the shape of the gap 43: 1937
- Monocular transparency generates quantitative depth 43: 2615
- Motion distorts perceived depth 43: 1799
- Paired and unpaired features can be equally effective in human depth perception 43: 1
- Peak localization of sparsely sampled luminance patterns is based on interpolated 3D surface representation 43: 2649
- A physiological theory of depth perception from vertical disparity 43: 85

- Poor visibility of motion in depth is due to early motion averaging 43: 385
- Reading a population code: a multi-scale neural model for representing binocular disparity 43: 445
- Spatio-temporal dynamics of depth propagation on uniform region 43: 2493
- Stereoscopic depth perception from oblique phase disparities 43: 2479
- Unconscious adaptation: a new illusion of depth induced by stimulus features without depth 43: 2773
- Weighted linear cue combination with possibly correlated error 43: 2451

## DETECTION THRESHOLD

- Colour thresholds in dichromats and normals 43: 983
- Position, size and luminosity of phosphenes generated by direct optic nerve stimulation 43: 1091
- Utility of a dynamic termination criterion in the ZEST adaptive threshold method 43: 165

## DEUTERANOPIA. *see* DICHROMACY

## DEVELOPMENT

- Amblyopia in astigmatic preschool children 43: 1081
- Children's pursuit eye movements: a developmental study 43: 77
- Early binocular vision in human infants: limitations on the generality of the Superposition Hypothesis 43: 1563
- Face processing in 8-month-old infants: evidence for configural and analytical processing 43: 2783
- Motion coherence thresholds in infants—different tasks identify at least two distinct motion systems 43: 1149
- Motion processing asymmetries and stereopsis in infants 43: 1961
- Recovery of the rod photoresponse in infant rats 43: 3081
- The roles of Hedgehogs and Fibroblast growth factors in eye development and retinal cell rescue 43: 899

## DICHROMACY

- Colour thresholds in dichromats and normals 43: 983

## DIPLOPIA. *see* BINOCULAR VISION

## DIRECTIONAL SENSITIVITY. *see* MOTION PERCEPTION, DIRECTIONAL SENSITIVITY

## DISPARITY. *see* BINOCULAR VISION; STEREOPSIS

## DRUG THERAPY

- Changes in choroidal blood flow during light/dark transitions are not altered by atropine or propranolol in healthy subjects 43: 2185
- Dexanabinol (HU-211) has a beneficial effect on axonal sprouting and survival after rat optic nerve crush injury 43: 237

## DYSLEXIA

- Can the magnocellular pathway read? Evidence from studies of color 43: 1211
- Contrast sensitivity in subgroups of developmental dyslexia 43: 467

## ECCENTRICITY. *see* PERIPHERAL VISION

## EDGE DETECTION. *see* CONTOUR PERCEPTION

## ELECTRORETINOGRAM

- Alterations of L- and M-cone driven ERGs in cone and cone-rod dystrophies 43: 2333
- Clinical features of the retinopathy, globe enlarged (*rge*) chick phenotype 43: 2009
- A comparison of three techniques to estimate the human dark-adapted cone electroretinogram 43: 2089
- Participation of the GABAergic system in the action of 2-amino-4-phosphonobutyrate on the OFF responses of frog retinal ganglion cells 43: 607
- The photopic ERG luminance-response function (photopic hill): method of analysis and clinical application 43: 1405

- Photoreceptor degeneration and *rdl* mutation in the *grizzled/mocha* mouse strain 43: 859
- Remodeling of second-order neurons in the retina of *rd/rd* mutant mice 43: 867
- Retinal function in Bothnia dystrophy. An electrophysiological study 43: 2559
- Simultaneously recording local luminance responses, spatial and temporal interactions in the visual system with *m*-sequences 43: 1689
- The visual acuity and refractive state of the American kestrel (*Falco sparverius*) 43: 2053

## EMMETROPIZATION

- Further evidence that chick eyes use the sign of blur in spectacle lens compensation 43: 1519

## EVOKED POTENTIALS

- Cortical OFF-potentials from the S-cone pathway reveal neural damage in early glaucoma 43: 221
- Electrical activity in visual cortex associated with combined auditory and visual stimulation in temporal sequences known to be associated with a visual illusion 43: 2469
- Electrophysiological correlates of purely temporal figure-ground segregation 43: 2583
- Feature-specific electrophysiological correlates of texture segregation 43: 7
- Longer VEP latencies and slower reaction times to the onset of second-order motion than to the onset of first-order motion 43: 651
- Simultaneously recording local luminance responses, spatial and temporal interactions in the visual system with *m*-sequences 43: 1689
- Visual evoked potentials to line- and luminance-defined triangles 43: 299
- Visual reaction time: neural conditions for the equivalence of stimulus area and contrast (letter) 43: 2937
- Visual reaction time to grating onset: reply to Donner and Fagerholm (letter) 43: 2941

## EYE DOMINANCE

- Coordinating one hand with two eyes: optimizing for field of view in a pointing task 43: 409
- Correlation between hand preference and intraocular pressure from right- and left-eyes in right- and left-handers 43: 405
- Ocular prevalence *versus* ocular dominance 43: 1397

## EYE-HAND COORDINATION

- Coordinating one hand with two eyes: optimizing for field of view in a pointing task 43: 409

## EYE MOVEMENTS

- Effects of tenotomy surgery on congenital nystagmus waveforms in adult patients. Part I. Wavelet spectral analysis 43: 2345
- Effects of tenotomy surgery on congenital nystagmus waveforms in adult patients. Part II. Dynamical systems analysis 43: 2357
- Eye movements provide the extra-retinal signal required for the perception of depth from motion parallax 43: 1553
- Illusory jitter in a static stimulus surrounded by a synchronously flickering pattern 43: 957
- Sustained deviation of gaze direction can affect “inverted vection” induced by the foreground motion 43: 745
- Utilisation of spatial frequency information in face search 43: 2505

## EYE MOVEMENTS, DIRECTIONAL SENSITIVITY

- Oculomotor strategies for the direction of gaze tested with a real-world activity 43: 333

## EYE MOVEMENTS, OPTOKINETIC

- Disorders of vertical optokinetic nystagmus in patients with ocular misalignment 43: 347
- Motion coherence thresholds in infants—different tasks identify at least two distinct motion systems 43: 1149
- Motion processing asymmetries and stereopsis in infants 43: 1961
- Optokinetic potential and the perception of head-centred speed 43: 1709
- Short-latency ocular following in humans is dependent on absolute (rather than relative) binocular disparity 43: 1387

## EYE MOVEMENTS, SACCADIC

- Comparison of performance on memory-guided saccade and delayed spatial match-to-sample tasks in monkeys 43: 321
- Different visual search strategies in stationary and moving radial patterns 43: 1201
- Effects of training on memory-guided saccade performance 43: 2061
- Fixation stability and saccadic latency in elite shooters 43: 1837
- Head-free reading of horizontally and vertically arranged texts (2002) (erratum) 43: 1595
- Inhibition of saccade return in reading 43: 1027
- Localization of shapes: eye movements and perception compared 43: 1637
- Low-level predictive inference in reading: the influence of transitional probabilities on eye movements 43: 1735
- Microsaccades uncover the orientation of covert attention 43: 1035
- Oculomotor strategies for the direction of gaze tested with a real-world activity 43: 333
- The role of presaccadic compression of visual space in spatial remapping across saccadic eye movements 43: 1969
- Sequential memory-guided saccades and target selection: a neural model of the frontal eye fields 43: 2669
- Spatial localization precedes temporal determination in visual perception 43: 1667

## EYE MOVEMENTS, SMOOTH PURSUIT

- Centric-minded templates for self-motion perception 43: 1473
- Children's pursuit eye movements: a developmental study 43: 77
- Optokinetic potential and the perception of head-centred speed 43: 1709
- Self-organizing neural network model of motion processing in the visual cortex during smooth pursuit 43: 2155

## EYE MOVEMENTS, VERGENCE

- Comparison of the time courses of concomitant and nonconcomitant vertical phoria adaptation 43: 567
- Short-latency disparity-vergence eye movements in humans: sensitivity to simulated orthogonal tropias 43: 431
- Stereopsis is perturbed by vergence error 43: 181
- Stereothresholds with simulated vergence variability and constant error 43: 195

## EYE MOVEMENTS, VESTIBULO-OCULAR

- Orientation of Listing's plane during static tilt in young and older human subjects 43: 67
- Visual motion detection in patients with absent vestibular function 43: 1589

## FACE RECOGNITION

- An integrated network for invariant visual detection and recognition 43: 2073
- Configural information is processed differently in perception and recognition of faces 43: 1501
- Face processing in 8-month-old infants: evidence for configural and analytical processing 43: 2783
- Face recognition with perspective transformation 43: 2393
- Human visual object categorization can be described by models with low memory capacity 43: 2265
- Matching expression variant faces 43: 1047
- Scaling of letter size and contrast equalises perception across eccentricities and set sizes 43: 769
- The use of facial motion and facial form during the processing of identity 43: 1921
- Utilisation of spatial frequency information in face search 43: 2505

## FEATURE DETECTION (*see also* SEGMENTATION)

- Face recognition with perspective transformation 43: 2393
- Fusion of competing features is not serial 43: 1951
- Global feature-based attention for motion and color 43: 629
- Human visual object categorization can be described by models with low memory capacity 43: 2265
- Motion detection and the coincidence of structure at high and low spatial frequencies 43: 371
- Spatiotemporal characteristics of dynamic feature binding in visual working memory 43: 2107

## FIGURE-GROUND SEGREGATION

- Electrophysiological correlates of purely temporal figure-ground segregation 43: 2583
- Feature-specific electrophysiological correlates of texture segregation 43: 7
- Visual evoked potentials to line- and luminance-defined triangles 43: 299
- The watercolor effect: a new principle of grouping and figure-ground organization 43: 43

## FILLING-IN. *see* VISUAL FIELD, FILLING-IN

## FISH VISION

- Biplexiform ganglion cells in the retina of the perciform fish *Pholidapus dybowskii* revealed by HRP labeling from the optic nerve and optic tectum 43: 1117
- GABA receptors on horizontal cells in the goldfish retina 43: 2101
- Multiple photopigments from the Mexican blind cavefish, *Astyanax fasciatus*: a microspectrophotometric study 43: 31
- The roles of Hedgehogs and Fibroblast growth factors in eye development and retinal cell rescue 43: 899
- Spatio-temporal frequency characteristics of the optomotor response in zebrafish 43: 21
- Stem cells in the teleost retina: persistent neurogenesis and injury-induced regeneration 43: 927
- Wavelength dependence of the optomotor response in zebrafish (*Danio rerio*) 43: 1273

## FIXATION

- Fixation stability and saccadic latency in elite shooters 43: 1837
- Illusory jitter in a static stimulus surrounded by a synchronously flickering pattern 43: 957
- Low-level predictive inference in reading: the influence of transitional probabilities on eye movements 43: 1735
- Ocular prevalence versus ocular dominance 43: 1397
- Stereopsis is perturbed by vergence error 43: 181

## FLICKER

- Hyperglycemia affects flicker-induced vasodilation in the retina of healthy subjects 43: 1495
- Illusory jitter in a static stimulus surrounded by a synchronously flickering pattern 43: 957
- A mechanistic inter-species comparison of flicker sensitivity 43: 1723

## FORM PERCEPTION

- An integrated network for invariant visual detection and recognition 43: 2073
- Attentional selection of overlapped shapes: a study using brief shape aftereffects 43: 549
- Effects of pictorially-defined surfaces on visual search 43: 1869
- Local and global contributions to shape discrimination 43: 519
- Localization of shapes: eye movements and perception compared 43: 1637
- Meridional anisotropy in visual processing: implications for the neural site of the oblique effect 43: 2281
- Observer strategies in perception of 3-D shape from isotropic textures: developable surfaces 43: 2741
- “Phase capture” in the perception of interpolated shape: cue combination and the influence function 43: 2233
- The spatial tuning of chromatic adaptation 43: 1611
- Visual comparisons within and between object parts: evidence for a single-part superiority effect 43: 1655
- Visual perception in a blind subject with a chronic microelectronic retinal prosthesis 43: 2573
- When does illusory contour formation depend on contrast polarity? 43: 1915

## FOVEA

- The distribution of preferred orientations in the peripheral visual field 43: 53
- Orientation discrimination in foveal and extra-foveal vision: effects of stimulus bandwidth and contrast 43: 1375
- Short-wavelength acuity: optical factors affecting detection and resolution of blue-yellow sinusoidal gratings in foveal and peripheral vision 43: 101

## GAIN CONTROL

- Chromatic induction and the layout of colours within a complex scene 43: 1413
- Dual nonlinearities regulate contrast sensitivity in pattern discrimination tasks 43: 1433
- A gain-control model relating nulling results to the duration of dynamic motion aftereffects 43: 117
- Independence of mechanisms tuned along cardinal and non-cardinal axes of color space: evidence from factor analysis 43: 683
- Motion sharpening and contrast: Gain control precedes compressive non-linearity? 43: 1187
- Temporal asymmetry in motion masking: a shortening of the temporal impulse response function 43: 261

## GANGLION CELLS

- Alterations of kynurenic acid content in the retina in response to retinal ganglion cell damage 43: 497
- Biplexiform ganglion cells in the retina of the perciform fish *Pholidapus dybowskii* revealed by HRP labeling from the optic nerve and optic tectum 43: 1117
- A decay of gap junctions associated with ganglion cell differentiation during retinal regeneration of the adult newt 43: 2847
- Participation of the GABAergic system in the action of 2-aminio-4-phosphonobutyrate on the OFF responses of frog retinal ganglion cells 43: 607
- Synaptic energy efficiency in retinal processing 43: 1283

## GAP JUNCTION

- A decay of gap junctions associated with ganglion cell differentiation during retinal regeneration of the adult newt 43: 2847

## GAZE

- Gaze modulation of visual aftereffects 43: 639
- Oculomotor strategies for the direction of gaze tested with a real-world activity 43: 333
- Sustained deviation of gaze direction can affect “inverted vection” induced by the foreground motion 43: 745

## GENE THERAPY

- Gene therapy for choroideremia: in vitro rescue mediated by recombinant adenovirus 43: 919

## GENES

- A2E, a byproduct of the visual cycle 43: 2983
- Analysis of L-cone/M-cone visual pigment gene arrays in females by long-range PCR 43: 489
- Analysis of three genes in Leber congenital amaurosis in Indonesian patients 43: 3087
- Assessing structural elements that influence Schiff base stability: mutants E113Q and D190N destabilize rhodopsin through different mechanisms 43: 2991
- Clinical features of the retinopathy, globe enlarged (*rge*) chick phenotype 43: 2009
- Effects of stimulus size and luminance on oscillopsia in congenital nystagmus 43: 2697
- Effects of tenotomy surgery on congenital nystagmus waveforms in adult patients. Part I. Wavelet spectral analysis 43: 2345
- Effects of tenotomy surgery on congenital nystagmus waveforms in adult patients. Part II. Dynamical systems analysis 43: 2357
- Inherited multifocal RPE-diseases: mechanisms for local dysfunction in global retinoid cycle gene defects 43: 3095
- Interphotoreceptor retinoid-binding protein—an old gene for new eyes 43: 3021
- Multiple photopigments from the Mexican blind cavefish, *Astyanax fasciatus*: a microspectrophotometric study 43: 31
- Novel targeting strategy for generating mouse models with defects in the retinoid cycle 43: 3075
- Origin of the vertebrate visual cycle: II. Visual cycle proteins are localized in whole brain including photoreceptor cells of a primitive chordate 43: 3045
- Photoreceptor degeneration and *rdl* mutation in the *grizzled/mocha* mouse strain 43: 859
- Pseudotyped AAV vectors for constitutive and regulated gene expression in the eye 43: 913
- Retinal transplantation of neural progenitor cells derived from the brain of GFP transgenic mice 43: 1699
- Retinoid cycle in the vertebrate retina: experimental approaches and mechanisms of isomerization 43: 2959
- Visual cycle retinoid processing proteins are present in HEK293S cells 43: 3037
- Visual field defects in albino ferrets (*Mustela putorius furo*) 43: 793

## GESTALT

- The watercolor effect: a new principle of grouping and figure-ground organization 43: 43

## GROUPING

- Collinear contextual suppression 43: 2915
- Differential ambiguity reduces grouping of metastable objects 43: 359

Grouping local directional signals into moving contours 43: 2141

The role of local grouping and global orientation contrast in perception of orientation-modulated textures 43: 2315

The watercolor effect: a new principle of grouping and figure-ground organization 43: 43

## HANDEDNESS

Correlation between hand preference and intraocular pressure from right- and left-eyes in right- and left-handers 43: 405

## HEAD MOVEMENTS

Head-free reading of horizontally and vertically arranged texts (2002) (erratum) 43: 1595

Visual motion detection in patients with absent vestibular function 43: 1589

## HEADING PERCEPTION

Centric-minded templates for self-motion perception 43: 1473

A model using MT-like motion-opponent operators explains an illusory transformation in the optic flow field 43: 2811

## HISTOCHEMISTRY. *see* NEUROCHEMISTRY

## HORIZONTAL CELLS

GABA receptors on horizontal cells in the goldfish retina 43: 2101

Remodeling of second-order neurons in the retina of rd/rd mutant mice 43: 867

## HYPERACUITY

Effects of contrast and length on vernier acuity explained with noisy templates 43: 707

Extending the shine-through effect to classical masking paradigms 43: 2659

Neural fine tuning during Vernier acuity training? 43: 1177

Orientation discrimination in foveal and extra-foveal vision: effects of stimulus bandwidth and contrast 43: 1375

Velocity dependence of Vernier and letter acuity for band-pass filtered moving stimuli 43: 669

## ILLUSION (*see also* AFTEREFFECTS)

An illusion of coherent global motion arising from single brief presentations of a stationary stimulus 43: 2387

Attention and scintillation 43: 2191

Chromatic induction in neon colour spreading 43: 697

Colour and luminance selectivity of spatial and temporal interactions in orientation perception 43: 2885

Configural information is processed differently in perception and recognition of faces 43: 1501

Electrical activity in visual cortex associated with combined auditory and visual stimulation in temporal sequences known to be associated with a visual illusion 43: 2469

Illusory jitter in a static stimulus surrounded by a synchronously flickering pattern 43: 957

Latency differences and the flash-lag effect 43: 1829

The watercolor effect: a new principle of grouping and figure-ground organization 43: 43

When does illusory contour formation depend on contrast polarity? 43: 1915

## ILLUSORY CONTOURS. *see* ILLUSION

## IMMUNOCHEMISTRY

The immunological properties of adult hippocampal progenitor cells 43: 947

Origin of the vertebrate visual cycle: II. Visual cycle proteins are localized in whole brain including photoreceptor cells of a primitive chordate 43: 3045

## INCREMENT THRESHOLD

Spatial summation of S-cone ON and OFF signals: effects of retinal eccentricity 43: 2875

## INJURY

- Alterations of kynurenic acid content in the retina in response to retinal ganglion cell damage 43: 497
- Dexanabinol (HU-211) has a beneficial effect on axonal sprouting and survival after rat optic nerve crush injury 43: 237
- Stem cells in the teleost retina: persistent neurogenesis and injury-induced regeneration 43: 927
- Transplantation of ocular stem cells: the role of injury in incorporation and differentiation of grafted cells in the retina 43: 937

## INSECT VISION

- Adaptation of response transients in fly motion vision. I: Experiments 43: 1291
- Adaptation of response transients in fly motion vision. II: Model studies 43: 1309
- Discrimination of single bars by the honeybee (*Apis mellifera*) 43: 1257

## INTEROCULAR TRANSFER. *see* AFTEREFFECTS

## INTRAOCULAR PRESSURE

- Correlation between hand preference and intraocular pressure from right- and left-eyes in right- and left-handers 43: 405

## IRIS

- Mechanical properties of the rabbit iris smooth muscles 43: 479

## LATENCY. *see* REACTION TIME

## LATERAL INHIBITION

- The selective tuning model of attention: psychophysical evidence for a suppressive annulus around an attended item 43: 205

## LATERAL INTERACTIONS

- Correlation between hand preference and intraocular pressure from right- and left-eyes in right- and left-handers 43: 405
- Timing of contextual modulation in the shine-through effect 43: 2039

## LENS

- Astigmatism in infant monkeys reared with cylindrical lenses 43: 2721
- Changes in the internal structure of the human crystalline lens with age and accommodation 43: 2363
- Further evidence that chick eyes use the sign of blur in spectacle lens compensation 43: 1519

## LETTER RECOGNITION

- Scaling of letter size and contrast equalises perception across eccentricities and set sizes 43: 769
- Spatial-frequency spectra of printed characters and human visual perception 43: 1507
- Velocity dependence of Vernier and letter acuity for band-pass filtered moving stimuli 43: 669
- Visual processing of rapidly presented stimuli is normalized in Parkinson's disease when proximal stimulus strength is enhanced 43: 2827

## LIGHT ADAPTATION. *see* ADAPTATION, LIGHT

## LISTING'S LAW

- Orientation of Listing's plane during static tilt in young and older human subjects 43: 67

## LOW VISION

- Is word recognition different in central and peripheral vision? 43: 2837

## LUMINANCE

- Effects of stimulus size and luminance on oscillopsia in congenital nystagmus 43: 2697
- Human temporal impulse response speeds up with increased stimulus contrast 43: 285

- The photopic ERG luminance-response function (photopic hill): method of analysis and clinical application 43: 1405
- Senescence of the temporal impulse response to a luminous pulse 43: 617
- Sensitivity to contrast modulation: the spatial frequency dependence of second-order vision 43: 243
- The spatial tuning of chromatic adaptation 43: 1611
- Task-specific perceptual learning on speed and direction discrimination 43: 1365
- Temporal asymmetry in motion masking: a shortening of the temporal impulse response function 43: 261
- Temporal properties of the visual responses to luminance and contrast modulated noise 43: 1855

## MACULAR PIGMENT

- Macular pigment density and distribution: comparison of fundus autofluorescence with minimum motion photometry 43: 1765

## MAGNOCELLULAR PATHWAYS. *see* PATHWAYS, MAGNOCELLULAR AND PARVOCELLULAR

## MASKING

- Direct parameter specification of an attention shift: evidence from perceptual latency priming 43: 1351
- Dual nonlinearities regulate contrast sensitivity in pattern discrimination tasks 43: 1433
- Extending the shine-through effect to classical masking paradigms 43: 2659
- Failure of signed chromatic apparent motion with luminance masking 43: 751
- Four-dot masking produces the attentional blink 43: 1907
- Neural fine tuning during Vernier acuity training? 43: 1177
- Spatial-frequency spectra of printed characters and human visual perception 43: 1507
- Temporal asymmetry in motion masking: a shortening of the temporal impulse response function 43: 261
- Timing of contextual modulation in the shine-through effect 43: 2039
- The what and where in visual masking 43: 1337

## McCOLLOUGH EFFECT. *see* AFTEREFFECTS

## MEMORY. *see* COGNITION

## MEMORY PERFORMANCE

- Comparison of performance on memory-guided saccade and delayed spatial match-to-sample tasks in monkeys 43: 321
- Effects of training on memory-guided saccade performance 43: 2061
- Large capacity storage of integrated objects before change blindness 43: 149
- Mental extrapolation of target position is strongest with weak motion signals and motor responses 43: 2623
- Sequential memory-guided saccades and target selection: a neural model of the frontal eye fields 43: 2669
- Visual search is facilitated by scene and sequence familiarity in rhesus monkeys 43: 1455

## MENTAL IMAGERY

- Mental extrapolation of target position is strongest with weak motion signals and motor responses 43: 2623

## METACONTRAST. *see* MASKING

## MONOCULAR VISION

- Visual field defects in albino ferrets (*Mustela putorius furo*) 43: 793

## MOTION PERCEPTION

- Adaptation of response transients in fly motion vision. I: Experiments 43: 1291
- Adaptation of response transients in fly motion vision. II: Model studies 43: 1309
- Color and motion: which is the tortoise and which is the hare? 43: 2403
- Deficits to global motion processing in human amblyopia 43: 729
- The dynamics of bi-stable alternation in ambiguous motion displays: a fresh look at plaids 43: 531

- Feature-specific electrophysiological correlates of texture segregation 43: 7
- A gain-control model relating nulling results to the duration of dynamic motion aftereffects 43: 117
- Geometric and induced effects in binocular stereopsis and motion parallax 43: 1879
- Grouping local directional signals into moving contours 43: 2141
- How is complex second-order motion processed? 43: 2591
- Illusory jitter in a static stimulus surrounded by a synchronously flickering pattern 43: 957
- Increasing depth of binocular rivalry suppression along two visual pathways 43: 2003
- The influence of color on the perception of luminance motion 43: 1159
- Influence of viewing distance on aftereffects of moving random pixel arrays 43: 2413
- Latency differences and the flash-lag effect 43: 1829
- Longer VEP latencies and slower reaction times to the onset of second-order motion than to the onset of first-order motion 43: 651
- Luminance mechanisms mediate the motion of red-green isoluminant gratings: the role of “temporal chromatic aberration” 43: 1235
- Mental extrapolation of target position is strongest with weak motion signals and motor responses 43: 2623
- Motion detection and the coincidence of structure at high and low spatial frequencies 43: 371
- Motion distorts perceived depth 43: 1799
- Motion sharpening and contrast: Gain control precedes compressive non-linearity? 43: 1187
- Perceived onset time and position of a moving stimulus 43: 1625
- Reversed-phi perception with motion-defined motion stimuli 43: 2517
- Self-organizing neural network model of motion processing in the visual cortex during smooth pursuit 43: 2155
- The shape and size of crowding for moving targets 43: 2895
- Short-latency ocular following in humans is dependent on absolute (rather than relative) binocular disparity 43: 1387
- Spatio-temporal frequency characteristics of the optomotor response in zebrafish 43: 21
- Sustained deviation of gaze direction can affect “invertedvection” induced by the foreground motion 43: 745
- Temporal asymmetry in motion masking: a shortening of the temporal impulse response function 43: 261
- The use of facial motion and facial form during the processing of identity 43: 1921
- Visual motion detection in patients with absent vestibular function 43: 1589
- Visual perception in a blind subject with a chronic microelectronic retinal prosthesis 43: 2573
- Wavelength dependence of the optomotor response in zebrafish (*Danio rerio*) 43: 1273
- Wavelength dependence of the optomotor response in zebrafish (*Danio rerio*) 43: 1273

## MOTION PERCEPTION, APPARENT MOTION

- An illusion of coherent global motion arising from single brief presentations of a stationary stimulus 43: 2387
- Failure of signed chromatic apparent motion with luminance masking 43: 751

## MOTION PERCEPTION, DIRECTIONAL SENSITIVITY

- Attentional modulation of threshold sensitivity to first-order motion and second-order motion patterns 43: 2927
- The detection of direction-defined and speed-defined spatial contours: one mechanism or two? 43: 597
- Different visual search strategies in stationary and moving radial patterns 43: 1201
- The efficiency of speed discrimination for coherent and transparent motion 43: 2795
- Global feature-based attention for motion and color 43: 629
- Motion coherence thresholds in infants—different tasks identify at least two distinct motion systems 43: 1149
- Motion processing asymmetries and stereopsis in infants 43: 1961
- Pattern cues disambiguate perceived direction in simple moving stimuli 43: 2291
- Sampling efficiency and internal noise for motion detection, discrimination, and summation 43: 2125
- Segregation from direction differences in dynamic random-dot stimuli 43: 171
- Speed tuning of direction repulsion describes an inverted U-function 43: 1847
- Task-specific perceptual learning on speed and direction discrimination 43: 1365

## MOTION PERCEPTION, MOTION-IN-DEPTH

- Eye movements provide the extra-retinal signal required for the perception of depth from motion parallax 43: 1553
- Poor visibility of motion in depth is due to early motion averaging 43: 385
- Spatial and temporal tuning of motion in depth 43: 2861

## MOTION PERCEPTION, OPTIC FLOW

- Centric-minded templates for self-motion perception 43: 1473
- Different visual search strategies in stationary and moving radial patterns 43: 1201
- Discrimination of travel distances from 'situated' optic flow 43: 2173
- FliMax*, a novel stimulus device for panoramic and highspeed presentation of behaviourally generated optic flow 43: 779
- A model using MT-like motion-opponent operators explains an illusory transformation in the optic flow field 43: 2811
- A neural network model of spiral-planar motion tuning in MSTd 43: 577
- Recovering slant and angular velocity from a linear velocity field: modeling and psychophysics 43: 1753

## MOTION PERCEPTION, SPEED SENSITIVITY

- The detection of direction-defined and speed-defined spatial contours: one mechanism or two? 43: 597
- The efficiency of speed discrimination for coherent and transparent motion 43: 2795
- Optokinetic potential and the perception of head-centred speed 43: 1709
- Segregation from direction differences in dynamic random-dot stimuli 43: 171
- Task-specific perceptual learning on speed and direction discrimination 43: 1365
- Velocity dependence of Vernier and letter acuity for band-pass filtered moving stimuli 43: 669

## MYOPIA

- An evaluation of the lag of accommodation using photorefractive 43: 419
- Further evidence that chick eyes use the sign of blur in spectacle lens compensation 43: 1519

## NATURAL IMAGES

- Coding of the contrasts in natural images by populations of neurons in primary visual cortex (V1) 43: 1983
- Contrast conservation in human vision 43: 2637
- FliMax*, a novel stimulus device for panoramic and highspeed presentation of behaviourally generated optic flow 43: 779
- Oblique stimuli are seen best (not worst!) in naturalistic broad-band stimuli: a horizontal effect 43: 1329
- Orientational minimal redundancy wavelets: from edge detection to perception 43: 1061
- Power spectra and distribution of contrasts of natural images from different habitats 43: 2527
- Representation of statistical properties 43: 393
- Variance normalisation: a key mechanism for temporal adaptation in natural vision? 43: 1895

## NEURAL NETWORKS

- A neural network model of spiral-planar motion tuning in MSTd 43: 577
- The selective tuning model of attention: psychophysical evidence for a suppressive annulus around an attended item 43: 205
- Self-organizing neural network model of motion processing in the visual cortex during smooth pursuit 43: 2155
- Sequential memory-guided saccades and target selection: a neural model of the frontal eye fields 43: 2669

## NEUROCHEMISTRY

- Alterations of kynurenic acid content in the retina in response to retinal ganglion cell damage 43: 497
- Functional mapping of somatostatin receptors in the retina: a review 43: 1805
- Functional modifications in rod bipolar cells in a mouse model of retinitis pigmentosa 43: 879
- GABA receptors on horizontal cells in the goldfish retina 43: 2101
- Ontogenic changes of kynurenine aminotransferase I activity and its expression in the chicken retina 43: 1513
- Participation of the GABAergic system in the action of 2-aminio-4-phosphonobutyrate on the OFF responses of frog retinal ganglion cells 43: 607

## NEURODEGENERATIVE DISEASES. *see* PATHOLOGY

## NEUROGENESIS

- The roles of Hedgehogs and Fibroblast growth factors in eye development and retinal cell rescue 43: 899
- Stem cells in the teleost retina: persistent neurogenesis and injury-induced regeneration 43: 927

## NEURONAL REMODELING

- Müller cell and neuronal remodeling in retinal detachment and reattachment and their potential consequences for visual recovery: a review and reconsideration of recent data 43: 887
- Remodeling of second-order neurons in the retina of rd/rd mutant mice 43: 867

## NEUROTRANSMITTER. *see* NEUROCHEMISTRY

## NOISE

- Additive noise, Weibull functions and the approximation of psychometric functions (2002) (corrigendum) 43: 855
- Effects of contrast and length on vernier acuity explained with noisy templates 43: 707
- Efficiency and internal noise for detection of suprathreshold patterns measured using simple reaction time 43: 1103
- Luminance mechanisms mediate the motion of red-green isoluminant gratings: the role of “temporal chromatic aberration” 43: 1235
- Orientation discrimination in visual noise using global and local stimuli 43: 1223
- Sampling efficiency and internal noise for motion detection, discrimination, and summation 43: 2125
- Sensitivity to contrast modulation: the spatial frequency dependence of second-order vision 43: 243
- Spatial-frequency spectra of printed characters and human visual perception 43: 1507
- Temporal properties of the visual responses to luminance and contrast modulated noise 43: 1855

## OBJECT RECOGNITION

- An integrated network for invariant visual detection and recognition 43: 2073
- Human visual object categorization can be described by models with low memory capacity 43: 2265
- Peak localization of sparsely sampled luminance patterns is based on interpolated 3D surface representation 43: 2649
- Spatiotemporal characteristics of dynamic feature binding in visual working memory 43: 2107

## OCCLUSION

- Monocular gap stereopsis: manipulation of the outer edge disparity and the shape of the gap 43: 1937
- Monocular transparency generates quantitative depth 43: 2615
- Paired and unpaired features can be equally effective in human depth perception 43: 1

## OCULAR DIMENSIONS

- Further evidence that chick eyes use the sign of blur in spectacle lens compensation 43: 1519

## OCULAR DOMINANCE

- Correlation between hand preference and intraocular pressure from right- and left-eyes in right- and left-handers 43: 405
- Ocular prevalence *versus* ocular dominance 43: 1397

## OCULOMOTOR ADAPTATION. *see* ADAPTATION, OCULOMOTOR

## OCULOMOTOR ANATOMY

- Effects of tenotomy surgery on congenital nystagmus waveforms in adult patients. Part I. Wavelet spectral analysis 43: 2345
- Effects of tenotomy surgery on congenital nystagmus waveforms in adult patients. Part II. Dynamical systems analysis 43: 2357
- Mechanical properties of the rabbit iris smooth muscles 43: 479

## ON-OFF PATHWAYS. *see* PATHWAYS, ON-OFF

## OPTIC FLOW. *see* MOTION PERCEPTION, OPTIC FLOW

## OPTIC NERVE

- Biplexiform ganglion cells in the retina of the perciform fish *Pholidapus dybowskii* revealed by HRP labeling from the optic nerve and optic tectum 43: 1117

Dexanabinol (HU-211) has a beneficial effect on axonal sprouting and survival after rat optic nerve crush injury 43: 237

Position, size and luminosity of phosphenes generated by direct optic nerve stimulation 43: 1091

## OPTIC TECTUM

Biplexiform ganglion cells in the retina of the perciform fish *Pholidapus dybowskii* revealed by HRP labeling from the optic nerve and optic tectum 43: 1117

## OPTICAL QUALITY

The influence of the Stiles–Crawford peak location on visual performance 43: 659

## OPTOKINETIC EYE MOVEMENTS. *see* EYE MOVEMENTS, OPTOKINETIC

## OPTOMOTOR RESPONSE

Spatio-temporal frequency characteristics of the optomotor response in zebrafish 43: 21

## ORIENTATION DISCRIMINATION

The distribution of preferred orientations in the peripheral visual field 43: 53

Expectancy effects on spatial frequency processing 43: 2759

Opposing views on orthogonal adaptation: a reply to Westheimer and Gee (2002) 43: 717 (discussion)

Opposing views on orthogonal adaptation: a response to Clifford, Arnold, Smith and Pianta (2003) 43: 721 (discussion)

Orientation discrimination in foveal and extra-foveal vision: effects of stimulus bandwidth and contrast 43: 1375

Orientation discrimination in visual noise using global and local stimuli 43: 1223

## ORIENTATION OPPONENCY

Orientation opponency in human vision revealed by energy-frequency analysis 43: 2197

## ORIENTATION PERCEPTION

Binocular recognition summation in the peripheral visual field: contrast and orientation dependence 43: 1249

Colour and luminance selectivity of spatial and temporal interactions in orientation perception 43: 2885

Different visual search strategies in stationary and moving radial patterns 43: 1201

The distribution of preferred orientations in the peripheral visual field 43: 53

Do humans optimally integrate stereo and texture information for judgments of surface slant? 43: 2539

Evidence for global processing but no evidence for specialised detectors in the visual processing of Glass patterns 43: 565 (letter)

Further evidence for global orientation processing in circular Glass patterns 43: 563 (letter)

Latency differences and the flash-lag effect 43: 1829

Meridional anisotropy in visual processing: implications for the neural site of the oblique effect 43: 2281

Oblique stimuli are seen best (not worst!) in naturalistic broad-band stimuli: a horizontal effect 43: 1329

Observer strategies in perception of 3-D shape from isotropic textures: developable surfaces 43: 2741

Pattern cues disambiguate perceived direction in simple moving stimuli 43: 2291

The role of local grouping and global orientation contrast in perception of orientation-modulated textures 43: 2315

Unilateral posterior parietal lobe lesions affect representation of visual space 43: 1675

Weighted linear cue combination with possibly correlated error 43: 2451

## PARVOCELLULAR PATHWAYS. *see* PATHWAYS, MAGNOCELLULAR AND PARVOCELLULAR

## PATHOLOGY

A2E, a byproduct of the visual cycle 43: 2983

Alterations of L- and M-cone driven ERGs in cone and cone-rod dystrophies 43: 2333

Analysis of three genes in Leber congenital amaurosis in Indonesian patients 43: 3087

Clinical features of the retinopathy, globe enlarged (*rge*) chick phenotype 43: 2009

A comparison of three techniques to estimate the human dark-adapted cone electroretinogram 43: 2089

- Cortical OFF-potentials from the S-cone pathway reveal neural damage in early glaucoma 43: 221
- Cortical visual functions can be preserved by subretinal RPE cell grafting in RCS rats 43: 1817
- Disorders of vertical optokinetic nystagmus in patients with ocular misalignment 43: 347
- Effect of dodecyl maltoside detergent on rhodopsin stability and function 43: 3055
- Functional modifications in rod bipolar cells in a mouse model of retinitis pigmentosa 43: 879
- Gene therapy for choroideremia: in vitro rescue mediated by recombinant adenovirus 43: 919
- Hyperglycemia affects flicker-induced vasodilation in the retina of healthy subjects 43: 1495
- Inherited multifocal RPE-diseases: mechanisms for local dysfunction in global retinoid cycle gene defects 43: 3095
- Macular pigment density and distribution: comparison of fundus autofluorescence with minimum motion photometry 43: 1765
- Novel targeting strategy for generating mouse models with defects in the retinoid cycle 43: 3075
- Patients with AMD and a large absolute central scotoma can be trained successfully to use eccentric viewing as demonstrated in a scanning laser ophthalmoscope 43: 1777
- The photopic ERG luminance-response function (photopic hill): method of analysis and clinical application 43: 1405
- Pseudotyped AAV vectors for constitutive and regulated gene expression in the eye 43: 913
- Retinal function in Bothnia dystrophy. An electrophysiological study 43: 2559
- The retinoid cycle and retina disease (editorial) 43: 2957
- Temporal visual filtering in diabetes mellitus 43: 2377
- Unilateral posterior parietal lobe lesions affect representation of visual space 43: 1675
- Visual processing of rapidly presented stimuli is normalized in Parkinson's disease when proximal stimulus strength is enhanced 43: 2827

## PATHWAYS

- Cortical OFF-potentials from the S-cone pathway reveal neural damage in early glaucoma 43: 221
- Increasing depth of binocular rivalry suppression along two visual pathways 43: 2003
- The what and where in visual masking 43: 1337

## PATHWAYS, LUMINANCE AND CHROMATIC

- Failure of signed chromatic apparent motion with luminance masking 43: 751
- Independence of mechanisms tuned along cardinal and non-cardinal axes of color space: evidence from factor analysis 43: 683
- The influence of color on the perception of luminance motion 43: 1159
- Luminance mechanisms mediate the motion of red-green isoluminant gratings: the role of "temporal chromatic aberration" 43: 1235

## PATHWAYS, MAGNOCELLULAR AND PARVOCELLULAR

- Can the magnocellular pathway read? Evidence from studies of color 43: 1211
- Contrast coding and magno/parvo segregation revealed in reaction time studies 43: 2707
- Contrast sensitivity in subgroups of developmental dyslexia 43: 467
- The influence of color on the perception of luminance motion 43: 1159
- Pupil responses associated with coloured afterimages are mediated by the magnocellular pathway 43: 1423
- Spatial frequency processing in inferred PC- and MC-pathways 43: 2133
- Temporal visual filtering in diabetes mellitus 43: 2377

## PATHWAYS, ON-OFF

- An illusion of coherent global motion arising from single brief presentations of a stationary stimulus 43: 2387
- Cortical OFF-potentials from the S-cone pathway reveal neural damage in early glaucoma 43: 221
- Participation of the GABAergic system in the action of 2-amino-4-phosphonobutyrate on the OFF responses of frog retinal ganglion cells 43: 607
- Spatial summation of S-cone ON and OFF signals: effects of retinal eccentricity 43: 2875

## PATHWAYS, SHORT-WAVELENGTH-SENSITIVITY

- Short-wavelength acuity: blue-yellow and achromatic resolution loss with age 43: 109
- Short-wavelength acuity: optical factors affecting detection and resolution of blue-yellow sinusoidal gratings in foveal and peripheral vision 43: 101

## PATTERN RECOGNITION

- Dual nonlinearities regulate contrast sensitivity in pattern discrimination tasks 43: 1433
- Feature-specific electrophysiological correlates of texture segregation 43: 7
- Local and global contributions to shape discrimination 43: 519

## PERCEPTUAL LEARNING

- An integrated network for invariant visual detection and recognition 43: 2073
- Discrimination of single bars by the honeybee (*Apis mellifera*) 43: 1257
- Effects of training on memory-guided saccade performance 43: 2061
- Experience-dependent visual cue recalibration based on discrepancies between visual and haptic percepts 43: 2603
- Fixation stability and saccadic latency in elite shooters 43: 1837
- Neural fine tuning during Vernier acuity training? 43: 1177
- Orientational minimal redundancy wavelets: from edge detection to perception 43: 1061
- Simulation of artificial vision: I. Eccentric reading of isolated words, and perceptual learning 43: 269
- Task-specific perceptual learning on speed and direction discrimination 43: 1365

## PERIPHERAL VISION

- Binocular recognition summation in the peripheral visual field: contrast and orientation dependence 43: 1249
- Contour integration in peripheral vision reduces gradually with eccentricity 43: 2427
- The distribution of preferred orientations in the peripheral visual field 43: 53
- Is word recognition different in central and peripheral vision? 43: 2837
- Orientation discrimination in foveal and extra-foveal vision: effects of stimulus bandwidth and contrast 43: 1375
- The shape and size of crowding for moving targets 43: 2895
- Short-wavelength acuity: blue-yellow and achromatic resolution loss with age 43: 109
- Short-wavelength acuity: optical factors affecting detection and resolution of blue-yellow sinusoidal gratings in foveal and peripheral vision 43: 101

## PHASE SENSITIVITY

- “Phase capture” in the perception of interpolated shape: cue combination and the influence function 43: 2233
- Stereoscopic depth perception from oblique phase disparities 43: 2479

## PHOTOCHEMISTRY

- A2E, a byproduct of the visual cycle 43: 2983
- Assessing structural elements that influence Schiff base stability: mutants E113Q and D190N destabilize rhodopsin through different mechanisms 43: 2991
- Availability of 11-cis retinal and opsins without chromophore as revealed by small bleaches of rhodopsin in excised albino mouse eyes 43: 3069
- Bleaching desensitization: background and current challenges 43: 3011
- Comparison between oleic acid and docosahexaenoic acid binding to interphotoreceptor retinoid-binding protein 43: 3063
- Effect of dodecyl maltoside detergent on rhodopsin stability and function 43: 3055
- Interphotoreceptor retinoid-binding protein—an old gene for new eyes 43: 3021
- Novel targeting strategy for generating mouse models with defects in the retinoid cycle 43: 3075
- Origin of the vertebrate visual cycle: II. Visual cycle proteins are localized in whole brain including photoreceptor cells of a primitive chordate 43: 3045
- Recovery of the rod photoresponse in infant rats 43: 3081
- The retinoid cycle and retina disease (editorial) 43: 2957
- Retinoid cycle in the vertebrate retina: experimental approaches and mechanisms of isomerization 43: 2959
- Secondary binding sites of retinoids in opsin: characterization and role in regeneration 43: 3003
- A simulation analysis on mechanisms of damped oscillation in retinal rod photoreceptor cells 43: 2019
- Visual cycle retinoid processing proteins are present in HEK293S cells 43: 3037

## PHOTOPIC VISION

- The photopic ERG luminance-response function (photopic hill): method of analysis and clinical application 43: 1405

## PHOTOPIGMENTS

- Cone pigment variations in four genera of new world monkeys 43: 227
- Multiple photopigments from the Mexican blind cavefish, *Astyanax fasciatus*: a microspectrophotometric study 43: 31
- The retinoid cycle and retina disease (editorial) 43: 2957
- Retinoid cycle in the vertebrate retina: experimental approaches and mechanisms of isomerization 43: 2959

## PHOTORECEPTORS (*see also* CONES; RODS)

- A2E, a byproduct of the visual cycle 43: 2983
- Assessing structural elements that influence Schiff base stability: mutants E113Q and D190N destabilize rhodopsin through different mechanisms 43: 2991
- Availability of 11-cis retinal and opsins without chromophore as revealed by small bleaches of rhodopsin in excised albino mouse eyes 43: 3069
- Bleaching desensitization: background and current challenges 43: 3011
- Comparison between oleic acid and docosahexaenoic acid binding to interphotoreceptor retinoid-binding protein 43: 3063
- Cortical visual functions can be preserved by subretinal RPE cell grafting in RCS rats 43: 1817
- Effect of dodecyl maltoside detergent on rhodopsin stability and function 43: 3055
- Interphotoreceptor retinoid-binding protein—an old gene for new eyes 43: 3021
- Müller cell and neuronal remodeling in retinal detachment and reattachment and their potential consequences for visual recovery: a review and reconsideration of recent data 43: 887
- Origin of the vertebrate visual cycle: II. Visual cycle proteins are localized in whole brain including photoreceptor cells of a primitive chordate 43: 3045
- Photoreceptor degeneration and *rdl* mutation in the *grizzled/mocha* mouse strain 43: 859
- Recovery of the rod photoresponse in infant rats 43: 3081
- The retinoid cycle and retina disease (editorial) 43: 2957
- Retinoid cycle in the vertebrate retina: experimental approaches and mechanisms of isomerization 43: 2959
- Secondary binding sites of retinoids in opsin: characterization and role in regeneration 43: 3003
- A simulation analysis on mechanisms of damped oscillation in retinal rod photoreceptor cells 43: 2019
- Temporal visual filtering in diabetes mellitus 43: 2377
- Visual cycle retinoid processing proteins are present in HEK293S cells 43: 3037

## PIGMENT EPITHELIUM

- A2E, a byproduct of the visual cycle 43: 2983
- Analysis of L-cone/M-cone visual pigment gene arrays in females by long-range PCR 43: 489
- Functional mapping of somatostatin receptors in the retina: a review 43: 1805
- Inherited multifocal RPE-diseases: mechanisms for local dysfunction in global retinoid cycle gene defects 43: 3095
- Novel targeting strategy for generating mouse models with defects in the retinoid cycle 43: 3075
- Retinal function in Bothnia dystrophy. An electrophysiological study 43: 2559
- Visual cycle retinoid processing proteins are present in HEK293S cells 43: 3037

## PLASTICITY

- Müller cell and neuronal remodeling in retinal detachment and reattachment and their potential consequences for visual recovery: a review and reconsideration of recent data 43: 887

## POPULATION CODE

- Reading a population code: a multi-scale neural model for representing binocular disparity 43: 445

## POST-RECEPTORAL ADAPTATION. *see* ADAPTATION, POST-RECEPTORAL

## PROSTHESIS

- Position, size and luminosity of phosphenes generated by direct optic nerve stimulation 43: 1091
- Visual perception in a blind subject with a chronic microelectronic retinal prosthesis 43: 2573

## PROTANOPIA. *see* DICHROMACY

## PUPIL

Mechanical properties of the rabbit iris smooth muscles 43: 479

Pupil responses associated with coloured afterimages are mediated by the magnocellular pathway 43: 1423

## REACTION TIME

Color and motion: which is the tortoise and which is the hare? 43: 2403

Contrast coding and magno/parvo segregation revealed in reaction time studies 43: 2707

Direct parameter specification of an attention shift: evidence from perceptual latency priming 43: 1351

Efficiency and internal noise for detection of suprathreshold patterns measured using simple reaction time 43: 1103

Fixation stability and saccadic latency in elite shooters 43: 1837

Longer VEP latencies and slower reaction times to the onset of second-order motion than to the onset of first-order motion 43: 651

The overlay interference task and object-selective visual attention 43: 1443

Visual reaction time: neural conditions for the equivalence of stimulus area and contrast (letter) 43: 2937

Visual reaction time to grating onset: reply to Donner and Fagerholm (letter) 43: 2941

The what and where in visual masking 43: 1337

## READING

An evaluation of the lag of accommodation using photorefraction 43: 419

Can the magnocellular pathway read? Evidence from studies of color 43: 1211

Contrast sensitivity in subgroups of developmental dyslexia 43: 467

Head-free reading of horizontally and vertically arranged texts (2002) (erratum) 43: 1595

Inhibition of saccade return in reading 43: 1027

Is word recognition different in central and peripheral vision? 43: 2837

Low-level predictive inference in reading: the influence of transitional probabilities on eye movements 43: 1735

Patients with AMD and a large absolute central scotoma can be trained successfully to use eccentric viewing, as demonstrated in a scanning laser ophthalmoscope 43: 1777

Simulation of artificial vision: I. Eccentric reading of isolated words, and perceptual learning 43: 269

## RECEPTIVE FIELD (*see also specific cell type*)

Coding of the contrasts in natural images by populations of neurons in primary visual cortex (V1) 43: 1983

Power spectra and distribution of contrasts of natural images from different habitats 43: 2527

Synaptic energy efficiency in retinal processing 43: 1283

Temporal visual filtering in diabetes mellitus 43: 2377

## RECEPTOR POTENTIAL. *see* CONES; ELECTRORETINOGRAM; PHOTORECEPTORS; RODS

## REFRACTION

Amplitude dependent accommodative dynamics in humans 43: 2945

An evaluation of the lag of accommodation using photorefraction 43: 419

Astigmatism in infant monkeys reared with cylindrical lenses 43: 2721

Further evidence that chick eyes use the sign of blur in spectacle lens compensation 43: 1519

The visual acuity and refractive state of the American kestrel (*Falco sparverius*) 43: 2053

## RETINA

A2E, a byproduct of the visual cycle 43: 2983

Alterations of kynurenic acid content in the retina in response to retinal ganglion cell damage 43: 497

Analysis of three genes in Leber congenital amaurosis in Indonesian patients 43: 3087

Assessing structural elements that influence Schiff base stability: mutants E113Q and D190N destabilize rhodopsin through different mechanisms 43: 2991

- Biplexiform ganglion cells in the retina of the perciform fish *Pholidapus dybowskii* revealed by HRP labeling from the optic nerve and optic tectum 43: 1117
- Clinical features of the retinopathy, globe enlarged (*rge*) chick phenotype 43: 2009
- A decay of gap junctions associated with ganglion cell differentiation during retinal regeneration of the adult newt 43: 2847
- Filling-in of retinal scotomas 43: 971
- Functional mapping of somatostatin receptors in the retina: a review 43: 1805
- Functional modifications in rod bipolar cells in a mouse model of retinitis pigmentosa 43: 879
- GABA receptors on horizontal cells in the goldfish retina 43: 2101
- Gene therapy for choroideremia: in vitro rescue mediated by recombinant adenovirus 43: 919
- Hyperglycemia affects flicker-induced vasodilation in the retina of healthy subjects 43: 1495
- Müller cell and neuronal remodeling in retinal detachment and reattachment and their potential consequences for visual recovery: a review and reconsideration of recent data 43: 887
- Ontogenic changes of kynurenine aminotransferase I activity and its expression in the chicken retina 43: 1513
- Participation of the GABAergic system in the action of 2-amino-4-phosphonobutyrate on the OFF responses of frog retinal ganglion cells 43: 607
- The photopic ERG luminance-response function (photopic hill): method of analysis and clinical application 43: 1405
- Pseudotyped AAV vectors for constitutive and regulated gene expression in the eye 43: 913
- Remodeling of second-order neurons in the retina of rd/rd mutant mice 43: 867
- Retinal function in Bothnia dystrophy. An electrophysiological study 43: 2559
- Retinal transplantation of neural progenitor cells derived from the brain of GFP transgenic mice 43: 1699
- The roles of Hedgehogs and Fibroblast growth factors in eye development and retinal cell rescue 43: 899
- Short-latency disparity-vergence eye movements in humans: sensitivity to simulated orthogonal tropias 43: 431
- Spatial summation of S-cone ON and OFF signals: effects of retinal eccentricity 43: 2875
- Stem cells in the teleost retina: persistent neurogenesis and injury-induced regeneration 43: 927
- Synaptic energy efficiency in retinal processing 43: 1283
- Transplantation of ocular stem cells: the role of injury in incorporation and differentiation of grafted cells in the retina 43: 937

## RETINAL DISEASE. *see* PATHOLOGY

## RETINOID CYCLE

- Availability of 11-cis retinal and opsins without chromophore as revealed by small bleaches of rhodopsin in excised albino mouse eyes 43: 3069
- Bleaching desensitization: background and current challenges 43: 3011
- Comparison between oleic acid and docosahexaenoic acid binding to interphotoreceptor retinoid-binding protein 43: 3063
- Inherited multifocal RPE-diseases: mechanisms for local dysfunction in global retinoid cycle gene defects 43: 3095
- Interphotoreceptor retinoid-binding protein—an old gene for new eyes 43: 3021
- Novel targeting strategy for generating mouse models with defects in the retinoid cycle 43: 3075
- Origin of the vertebrate visual cycle: II. Visual cycle proteins are localized in whole brain including photoreceptor cells of a primitive chordate 43: 3045
- The retinoid cycle and retina disease (editorial) 43: 2957

- Secondary binding sites of retinoids in opsin: characterization and role in regeneration 43: 3003
- Visual cycle retinoid processing proteins are present in HEK293S cells 43: 3037

## ROD-CONE INTERACTION. *see* CONES; RODS

## RODS

- Alterations of L- and M-cone driven ERGs in cone and cone-rod dystrophies 43: 2333
- Effects of light and dark adaptation of rods on specific-hue threshold 43: 2905
- Functional modifications in rod bipolar cells in a mouse model of retinitis pigmentosa 43: 879
- Recovery of the rod photoresponse in infant rats 43: 3081
- A simulation analysis on mechanisms of damped oscillation in retinal rod photoreceptor cells 43: 2019

**SACCADES.** *see* EYE MOVEMENTS, SACCADIC

## **SCOTOMA**

Filling-in of retinal scotomas 43: 971

Patients with AMD and a large absolute central scotoma can be trained successfully to use eccentric viewing, as demonstrated in a scanning laser ophthalmoscope 43: 1777

**SEARCH.** *see* VISUAL SEARCH

## **SEGMENTATION**

Context effects on texture border localization bias 43: 739

The dynamics of bi-stable alternation in ambiguous motion displays: a fresh look at plaids 43: 531

Short-latency ocular following in humans is dependent on absolute (rather than relative) binocular disparity 43: 1387

**SHAPE PERCEPTION.** *see* FORM PERCEPTION

**SHORT-WAVELENGTH-SENSITIVITY PATHWAYS.** *see* PATHWAYS, SHORT-WAVELENGTH-SENSITIVITY

## **SIZE PERCEPTION**

Representation of statistical properties 43: 393

Scaling of letter size and contrast equalises perception across eccentricities and set sizes 43: 769

## **SLEEP DEPRIVATION**

Effect of sleep deprivation and driving duration on the useful visual field in younger and older subjects during simulator driving 43: 1465

**SMOOTH PURSUIT EYE MOVEMENTS.** *see* EYE MOVEMENTS, SMOOTH PURSUIT

## **SPATIAL FREQUENCY** (*see also* PHASE SENSITIVITY)

Blobs strengthen repetition but weaken symmetry 43: 993

Contrast coding and magno/parvo segregation revealed in reaction time studies 43: 2707

Differential binocular input and local stereopsis 43: 2303

Expectancy effects on spatial frequency processing 43: 2759

Grouping local directional signals into moving contours 43: 2141

Motion detection and the coincidence of structure at high and low spatial frequencies 43: 371

Optokinetic potential and the perception of head-centred speed 43: 1709

Reading a population code: a multi-scale neural model for representing binocular disparity 43: 445

The role of local grouping and global orientation contrast in perception of orientation-modulated textures 43: 2315

Spatial and temporal tuning of motion in depth 43: 2861

Spatial frequency processing in inferred PC- and MC-pathways 43: 2133

Spatial-frequency spectra of printed characters and human visual perception 43: 1507

Spatio-temporal frequency characteristics of the optomotor response in zebrafish 43: 21

Temporal modulation of spatial contrast vision in pigeons (*Columba livia*) 43: 761

Utilisation of spatial frequency information in face search 43: 2505

Velocity dependence of Vernier and letter acuity for band-pass filtered moving stimuli 43: 669

Visual reaction time: neural conditions for the equivalence of stimulus area and contrast (letter) 43: 2937

Visual reaction time to grating onset: reply to Donner and Fagerholm (letter) 43: 2941

## **SPATIAL LOCALIZATION**

Divided attention and visual search for simple versus complex features 43: 2213

How many positions can we perceptually encode, one or many? 43: 1575

Localization of shapes: eye movements and perception compared 43: 1637

Motion distorts perceived depth 43: 1799

Peak localization of sparsely sampled luminance patterns is based on interpolated 3D surface representation 43: 2649

Spatial localization precedes temporal determination in visual perception 43: 1667

## SPATIAL SUMMATION. *see* SUMMATION, SPATIAL

## SPATIAL VISION (*see also* PHASE SENSITIVITY)

Comparison of performance on memory-guided saccade and delayed spatial match-to-sample tasks in monkeys 43: 321

The detection of direction-defined and speed-defined spatial contours: one mechanism or two? 43: 597

Extending the shine-through effect to classical masking paradigms 43: 2659

Hermite acuity gratings and models of space-variant acuity 43: 1597

Orientation discrimination in foveal and extra-foveal vision: effects of stimulus bandwidth and contrast 43: 1375

A paradox of temporal perception revealed by a stimulus oscillating in colour and orientation 43: 2245

The selective tuning model of attention: psychophysical evidence for a suppressive annulus around an attended item 43: 205

The spatial tuning of chromatic adaptation 43: 1611

## SPEED SENSITIVITY. *see* MOTION PERCEPTION, SPEED SENSITIVITY

## SPHERICAL ABERRATION. *see* ABERRATION

## STABILIZED VISION

The role of presaccadic compression of visual space in spatial remapping across saccadic eye movements 43: 1969

## STEM CELLS

The immunological properties of adult hippocampal progenitor cells 43: 947

Retinal transplantation of neural progenitor cells derived from the brain of GFP transgenic mice 43: 1699

Transplantation of ocular stem cells: the role of injury in incorporation and differentiation of grafted cells in the retina 43: 937

## STEREOPSIS

Adaptation to vertical disparity induced-depth: implications for disparity processing 43: 135

Detecting disparity in two-dimensional patterns 43: 1009

Differential binocular input and local stereopsis 43: 2303

Do humans optimally integrate stereo and texture information for judgments of surface slant? 43: 2539

Early binocular vision in human infants: limitations on the generality of the Superposition Hypothesis 43: 1563

Experience-dependent visual cue recalibration based on discrepancies between visual and haptic percepts 43: 2603

Geometric and induced effects in binocular stereopsis and motion parallax 43: 1879

The influence of cyclovergence on unconstrained stereoscopic matching 43: 307

A laminar cortical model of stereopsis and three-dimensional surface perception 43: 801

Monocular gap stereopsis: manipulation of the outer edge disparity and the shape of the gap 43: 1937

Monocular transparency generates quantitative depth 43: 2615

Motion processing asymmetries and stereopsis in infants 43: 1961

Ocular prevalence *versus* ocular dominance 43: 1397

Paired and unpaired features can be equally effective in human depth perception 43: 1

Peak localization of sparsely sampled luminance patterns is based on interpolated 3D surface representation 43: 2649

A physiological theory of depth perception from vertical disparity 43: 85

Reading a population code: a multi-scale neural model for representing binocular disparity 43: 445

Stereopsis is perturbed by vergence error 43: 181

Stereoscopic depth perception from oblique phase disparities 43: 2479

Stereothresholds with simulated vergence variability and constant error 43: 195

Temporal integration for stereoscopic vision 43: 505

Unconscious adaptation: a new illusion of depth induced by stimulus features without depth 43: 2773

## STILES-CRAWFORD EFFECT

The influence of the Stiles–Crawford peak location on visual performance 43: 659

## STRABISMUS (*see also* AMBLYOPIA)

Disorders of vertical optokinetic nystagmus in patients with ocular misalignment 43: 347

Temporal integration for stereoscopic vision 43: 505

## SUM POTENTIALS

Feature-specific electrophysiological correlates of texture segregation 43: 7

## SUMMATION

Evidence for global processing but no evidence for specialised detectors in the visual processing of Glass patterns 43: 565 (letter)

Further evidence for global orientation processing in circular Glass patterns 43: 563 (letter)

Independence of mechanisms tuned along cardinal and non-cardinal axes of color space: evidence from factor analysis 43: 683

Orientation discrimination in visual noise using global and local stimuli 43: 1223

## SUMMATION, BINOCULAR

Binocular recognition summation in the peripheral visual field: contrast and orientation dependence 43: 1249

## SUMMATION, SPATIAL

Effects of contrast and length on vernier acuity explained with noisy templates 43: 707

Further evidence for global orientation processing in circular Glass patterns 43: 563 (letter)

Response to Wilson & Wilkinson: Evidence for global processing but no evidence for specialised detectors in the visual processing of Glass patterns 43: 565 (letter)

Sampling efficiency and internal noise for motion detection, discrimination, and summation 43: 2125

Spatial summation of S-cone ON and OFF signals: effects of retinal eccentricity 43: 2875

## SUMMATION, TEMPORAL

Temporal integration for stereoscopic vision 43: 505

## SUPPRESSION. *see* BINOCULAR RIVALRY; VISUAL FIELD, SUPPRESSION

## SURFACE PERCEPTION

Effects of pictorially-defined surfaces on visual search 43: 1869

Exogenously cued attention triggers competitive selection of surfaces 43: 59

A laminar cortical model of stereopsis and three-dimensional surface perception 43: 801

Mixture models and the probabilistic structure of depth cues 43: 831

Visual evoked potentials to line- and luminance-defined triangles 43: 299

## SYMMETRY PERCEPTION

Blobs strengthen repetition but weaken symmetry 43: 993

## TECHNIQUES

Analysis of L-cone/M-cone visual pigment gene arrays in females by long-range PCR 43: 489

A comparison of three techniques to estimate the human dark-adapted cone electroretinogram 43: 2089

In vivo pachymetry in normal eyes of rats, mice and rabbits with the optical low coherence reflectometer 43: 723

Patients with AMD and a large absolute central scotoma can be trained successfully to use eccentric viewing, as demonstrated in a scanning laser ophthalmoscope 43: 1777

Utility of a dynamic termination criterion in the ZEST adaptive threshold method 43: 165

## TEMPORAL FREQUENCY

- Spatial and temporal tuning of motion in depth 43: 2861
- Spatio-temporal frequency characteristics of the optomotor response in zebrafish 43: 21
- Temporal modulation of spatial contrast vision in pigeons (*Columba livia*) 43: 761
- Velocity dependence of Vernier and letter acuity for band-pass filtered moving stimuli 43: 669

## TEMPORAL IMPULSE

- Human temporal impulse response speeds up with increased stimulus contrast 43: 285
- Senescence of the temporal impulse response to a luminous pulse 43: 617
- Temporal asymmetry in motion masking: a shortening of the temporal impulse response function 43: 261

## TEMPORAL INTEGRATION

- Temporal integration for stereoscopic vision 43: 505
- Temporal properties of the visual responses to luminance and contrast modulated noise 43: 1855
- Timing of contextual modulation in the shine-through effect 43: 2039
- Variance normalisation: a key mechanism for temporal adaptation in natural vision? 43: 1895

## TEMPORAL SEQUENCES

- Electrical activity in visual cortex associated with combined auditory and visual stimulation in temporal sequences known to be associated with a visual illusion 43: 2469
- Spatial localization precedes temporal determination in visual perception 43: 1667

## TEMPORAL SUMMATION. *see* SUMMATION, TEMPORAL

## TEXTURE PERCEPTION

- Context effects on texture border localization bias 43: 739
- Do humans optimally integrate stereo and texture information for judgments of surface slant? 43: 2539
- Feature-specific electrophysiological correlates of texture segregation 43: 7
- Mixture models and the probabilistic structure of depth cues 43: 831
- Observer strategies in perception of 3-D shape from isotropic textures: developable surfaces 43: 2741
- Orientation opponency in human vision revealed by energy-frequency analysis 43: 2197
- The role of local grouping and global orientation contrast in perception of orientation-modulated textures 43: 2315
- Weighted linear cue combination with possibly correlated error 43: 2451

## THRESHOLD. *see* CONTRAST SENSITIVITY; DETECTION THRESHOLD; INCREMENT THRESHOLD

## TRANSPARENCY

- Monocular transparency generates quantitative depth 43: 2615
- Reading a population code: a multi-scale neural model for representing binocular disparity 43: 445
- Segregation from direction differences in dynamic random-dot stimuli 43: 171
- Speed tuning of direction repulsion describes an inverted U-function 43: 1847

## TRANSPLANTATION

- The immunological properties of adult hippocampal progenitor cells 43: 947
- Retinal transplantation of neural progenitor cells derived from the brain of GFP transgenic mice 43: 1699
- Transplantation of ocular stem cells: the role of injury in incorporation and differentiation of grafted cells in the retina 43: 937

## TRITANOPIA. *see* DICHROMACY

## VELOCITY. *see* MOTION PERCEPTION, SPEED SENSITIVITY

VERGENCE. *see* EYE MOVEMENTS, VERGENCE

VERNIER ACUITY. *see* HYPERACUITY

VESTIBULO-OCULAR EYE MOVEMENTS. *see* EYE MOVEMENTS, VESTIBULO-OCULAR

VISUAL CYCLE. *see* RETINOID CYCLE

## VISUAL FIELD

Effect of sleep deprivation and driving duration on the useful visual field in younger and older subjects during simulator driving 43: 1465

Global feature-based attention for motion and color 43: 629

Orientation opponency in human vision revealed by energy-frequency analysis 43: 2197

The role of presaccadic compression of visual space in spatial remapping across saccadic eye movements 43: 1969

Temporal characteristics of binocular rivalry: visual field asymmetries 43: 2207

Visual field defects in albino ferrets (*Mustela putorius furo*) 43: 793

## VISUAL FIELD, FILLING-IN

Filling-in of retinal scotomas 43: 971

Spatio-temporal dynamics of depth propagation on uniform region 43: 2493

Visual field anisotropy revealed by perceptual filling-in 43: 2029

The watercolor effect: a new principle of grouping and figure-ground organization 43: 43

## VISUAL FIELD, SUPPRESSION

Collinear contextual suppression 43: 2915

Increasing depth of binocular rivalry suppression along two visual pathways 43: 2003

Intra- and interocular colour-specific activation during dichoptic suppression 43: 1111

Subjective contours and binocular rivalry suppression 43: 1533

Timing of contextual modulation in the shine-through effect 43: 2039

## VISUAL SEARCH

Different visual search strategies in stationary and moving radial patterns 43: 1201

Distractor heterogeneity, attention, and color in visual search 43: 1541

Divided attention and visual search for simple versus complex features 43: 2213

Effects of pictorially-defined surfaces on visual search 43: 1869

Oculomotor strategies for the direction of gaze tested with a real-world activity 43: 333

Sequential memory-guided saccades and target selection: a neural model of the frontal eye fields 43: 2669

Utilisation of spatial frequency information in face search 43: 2505

Visual search is facilitated by scene and sequence familiarity in rhesus monkeys 43: 1455

## VISUOMOTOR CONTROL

Coordinating one hand with two eyes: optimizing for field of view in a pointing task 43: 409

Effects of training on memory-guided saccade performance 43: 2061

Experience-dependent visual cue recalibration based on discrepancies between visual and haptic percepts 43: 2603

Gaze modulation of visual aftereffects 43: 639

Head-free reading of horizontally and vertically arranged texts (2002) (erratum) 43: 1595

Mental extrapolation of target position is strongest with weak motion signals and motor responses 43: 2623

Sustained deviation of gaze direction can affect “inverted vection” induced by the foreground motion 43: 745

## VISUOMOTOR INTEGRATION

Self-organizing neural network model of motion processing in the visual cortex during smooth pursuit 43: 2155

WAVELENGTH DISCRIMINATION. *see* COLOR DISCRIMINATION
